**LEGACY ENERGY MANAGEMENT SOLUTIONS ANNOUNCES COMPLETION OF
ELECTRICITY AGGREGATION PROGRAM**

*LEGACY's Cooperative Electric Purchasing Structure Allows
Municipal Utility Districts to Negotiate Better Rates and Terms*

HOUSTON (April 19, 2007) – Today, LEGACY Energy Management Solutions (LEGACY), a Houston-based energy advisory firm, announced the company's completion of the aggregation of 65 Texas Municipals into one of the most significant electricity aggregations structured since the deregulation of the Texas market in 2002. The aggregation allows the municipal utility districts (MUDS) to combine their purchasing power to negotiate better rates, terms and contracts by purchasing power like many of the larger buyers are able to do.

“We are pleased to be able to bring our MUD clients the rate savings and value attributable to the aggregation of their electricity usage,” said John Elder, president and chief executive officer for LEGACY. “Working with the utility districts and our strategic partners in the industry, we have developed a solution that represents a substantial leap in purchasing ability for those districts who would otherwise purchase power in smaller quantities and incur higher costs and less-favorable terms,” Elder added.

Richard Zdunkewicz, director of sales for LEGACY, added “aggregations or purchasing pools are an effective strategy for smaller load consumers to combine their purchases and shop for better pricing and more flexible agreements, something generally reserved for larger companies.”

LEGACY Electricity Aggregation Program . . . /add 2

As well as establishing aggregate structures for MUD's, LEGACY is continuing to implement these structures within its real estate and other industry clientele across the state of Texas. "We have found that many consumers of electricity in Texas are unaware that they can aggregate their loads to obtain better pricing," said Elder. "As a Public Utility Commission of Texas certified electricity aggregator, we can provide our clients with this same opportunity and develop sophisticated procurement strategies that complement their needs."

In addition to the value created by the aggregation, LEGACY will be providing the individual municipal utility districts with access to PowerViews™, the company's proprietary state-of-the-art software program. The new software provides a robust, web-based reporting system that permits the districts to easily observe its historical energy consumption, demand and expenditures. PowerViews™ provides Legacy's clients with a customizable tool to manage and control energy costs that can be used by facility operators and financial stakeholders from their desktop.

"PowerViews™ is useful in budget analysis, benchmarking and identifying opportunities for energy conservation," said Elisa Kaplan, director of energy services. "It's important for people to understand that energy savings doesn't stop once energy is procured, it must be managed through the entire process," she added.

About LEGACY Energy Management Services

LEGACY Energy Management Solutions is a leading provider of long-term energy management solutions to commercial and industrial customers helping them to more effectively manage and control their energy expenses. Combining the expertise of highly skilled energy management and business consulting professionals with best-in-class technology, the company is widely recognized for their expertise in energy analysis, energy software design and application, contract negotiation, energy trading and risk management.
