**LEGACY Energy Solutions  
Launches Demand Response Program**

HOUSTON, TX (May 1, 2008) – LEGACY Energy Solutions (LEGACY), a leading provider of energy management solutions has teamed up with CenterPoint Energy to launch a demand response program that will provide 5,000 kW of emergency peak electricity reserves for ERCOT emergency conditions from July through September 30, 2008. The program is administered by CenterPoint and requires all participants to have a minimum of 200kW of curtailable load, an IDR meter and a pledge to curtail their agreed upon loads between 1PM to 7PM for up to five over that period of months. Each participant that complies is eligible to receive incentive payments.

The new demand response program is a critical component of the ongoing efforts by the State of Texas, CenterPoint and LEGACY to help reduce the increasing strain on the electricity grid. “As energy consultants, we feel it is important to explore and embrace all programs that can create a win-win for our clients, consumers and the environment,” said John Elder, CEO LEGACY Energy Solutions. Elder continued “CenterPoint should be commended for this program, it is easy to qualify for, implement and will help protect against rolling black outs and brown outs during the summer months.”

To participate, LEGACY clients had to pass a four step screening process that included a load management application, demand response agreement, letter of agency
